

Homology, Homotopy and Applications

Volume **8(2)**, 2006

1. Bords homotopiques et modèles de Quillen Thomas Kahl, Pascal Lambrechts and Lucile Vandembroucq	1–28
2. Homotopy invariance in E-theory Klaus Thomsen	29–49
3. Matrices and Finite Biquandles Sam Nelson and John Vo	51–73
4. Stable splittings of classifying spaces of finite groups: Bridging the work of Benson–Feshbach and Martino–Priddy Jill Dietz	75–90
5. Homology with local coefficients and characteristic classes Robert Greenblatt	91–103
6. The eta invariant and the “twisted” connective K -theory of the classifying space for cyclic 2-groups Egidio Barrera-Yanez	105–114
7. Deformations of associative algebras with inner products John Terilla and Thomas Tradler	115–131
8. An explicit classification of three-stage Postnikov towers Peter I. Booth	133–155
9. A construction of quotient A_∞ -categories Volodymyr Lyubashenko and Sergiy Ovsienko	157–203
