

Homology, Homotopy and Applications

Volume **9**(1), 2007

1. Higher order cohomology operations and minimal atomicity Rochelle Pereira	1–43
2. Support varieties: an ideal approach Aslak Bakke Buan, Henning Krause and Øyvind Solberg	45–74
3. Notes on 2-groupoids, 2-groups and crossed modules Behrang Noohi	75–106
4. Simplicial model category structures on the category of chain functors Friedrich W. Bauer and Tamar Datuashvili	107–138
5. 3-Types of simplicial groups and braided regular crossed modules Z. Arvasi and E. Ulualan	139–161
6. On lifting stable diagrams in Frobenius categories Matthias Künzer	163–183
7. A class of left ideals of the Steenrod algebra I. Johnson and J. L. Merzel	185–191
8. Hyperarbres, arbres enracinés et partitions pointées F. Chapoton	193–212
9. Classification of di-embeddings of the n -cube into \mathbb{R}^n Praphat Fernandes and Andrew Nicas	213–220
10. The fundamental weighted category of a weighted space: From directed to weighted algebraic topology Marco Grandis	221–256

Homology, Homotopy and Applications

Volume **9**(1), 2007

continued from back cover

11. Compactly generated homotopy categories Henrik Holm and Peter Jørgensen	257–274
12. On low-dimensional homology in categories Tomas Everaert and Marino Gran	275–293
13. On the homotopy type and the fundamental crossed complex of the skeletal filtration of a CW-complex João Faria Martins	295–329
14. On the 2-adic K -localizations of H -spaces A.K. Bousfield	331–366
15. Model structures on pro-categories Halvard Fausk and Daniel C. Isaksen	367–398
16. t -model structures Halvard Fausk and Daniel C. Isaksen	399–438
17. Deformation of Leibniz algebra morphisms Ashis Mandal	439–450
18. Simple omega-categories and chain complexes Richard Steiner	451–465
19. Equivariant Morse relations Mahuya Datta and Neeta Pandey	467–483
