

# *Homology, Homotopy and Applications*

Volume **11**(1), 2009

1. A universal property for $Sp(2)$ at the prime 3 Jelena Grbić and Stephen Theriault .....	1–15
2. Umkehr maps Ralph L. Cohen and John R. Klein .....	17–33
3. Homotopy theory of presheaves of $\Gamma$ -spaces Håkon Schad Bergsaker .....	35–60
4. Homotopy nilpotency in localized $SU(n)$ Daisuke Kishimoto .....	61–79
5. Flat cyclic Fréchet modules, amenable Fréchet algebras, and approximate identities A.Yu. Pirkovskii .....	81–114
6. Local acyclic fibrations and the de Rham complex Ben Lee .....	115–140
7. Classifying rational $G$ -spectra for finite $G$ David Barnes .....	141–170
8. A homotopical algebra of graphs related to zeta series Terrence Bisson and Aristide Tsemo .....	171–184
9. Models and van Kampen theorems for directed homotopy theory Peter Bubenik .....	185–202
10. On $H^*(\mathcal{C}; k^\times)$ for fusion systems Markus Linckelmann .....	203–218

*continued on the facing overleaf*

*Homology, Homotopy and Applications*

Volume **11**(1), 2009

*continued from back cover*

11. Local and stable homological algebra in Grothendieck abelian categories Denis-Charles Cisinski and Frédéric Déglise .....	219–260
12. On the chain-level intersection pairing for PL pseudomanifolds Greg Friedman .....	261–314
13. Steenrod operations on the negative cyclic homology of the shc-cochain algebras Calvin Tcheke .....	315–348
14. Oriented cohomology theories of algebraic varieties II Ivan Panin .....	349–405
