

Homology, Homotopy and Applications

Volume **13**(1), 2011

1. Matrads, biassociahedra, and A_∞ -bialgebras Samson Sanedlidze and Ronald Umble	1–57
2. Homology and central extensions of Leibniz and Lie n -algebras José Manuel Casas, Emzar Khmaladze, Manuel Ladra and Tim Van der Linden	59–74
3. Colocalization functors in derived categories and torsion theories Shoham Shamir	75–88
4. On the 3-arrow calculus for homotopy categories Sebastian Thomas	89–119
5. The Brown-Golasinski model structure on strict ∞ -groupoids revisited Dimitri Ara and François Métayer	121–142
6. Smooth functors vs. differential forms Urs Schreiber and Konrad Waldorf	143–203
7. Generalized Davis-Januszkiewicz spaces, multicomplexes and monomial rings Alvise J. Trevisan	205–221
8. p -local finite group cohomology Ran Levi and Kári Ragnarsson	223–257
9. Operations on the Hopf-Hochschild complex for module-algebras Donald Yau	259–272
10. Steenrod’s operations in simplicial Bredon-Illman cohomology with local coefficients Goutam Mukherjee and Debasis Sen	273–296

Homology, Homotopy and Applications

Volume **13**(1), 2011

continued from back cover

11. Cyclic structures in algebraic (co)homology theories Niels Kowalzig and Ulrich Krähmer	297–318
12. Čech approximation to the Brown-Gersten spectral sequence Benjamin Antieau	319–348
13. Rational visibility of a Lie group in the monoid of self-homotopy equivalences of a homogeneous space Katsuhiko Kuribayashi	349–379
14. Productive elements in group cohomology Ergün Yalçın	381–401
15. Erratum to ‘Discovering spaces’ Lisbeth Fajstrup	403–406
