Preface

Though human cognition appears to comprehend the continuum, human action by and large takes place in discrete epochs. Discrete mathematics is that part of mathematics which deals with systematic treatment and understanding of discrete structures and processes encountered in our day-to-day life, which are often inherently quite complex in nature but seemingly understandable. Illustration of this character of discrete mathematics is abound with excitements, occasionally even to a common man. Further, discrete mathematics cuts across wide range of disciplines of human understanding not only in areas of pure mathematics but also in a variety of application areas, so much so that no other single area of mathematics has perhaps this special character of 'transversality'.

The holding of the International Conference on Discrete Mathematics during June 6–10, 2008 (ICDM-2008) was hence aimed to bring together a sizeable number of active researchers engaged in foraying into the frontiers of the subject. To our delight, there were more than 250 participants, including more than a dozen experts from abroad (see the list of their names, with addresses, appended to this volume), each of whose presentations contributed substantially to raise the academic atmosphere filled with the spirit of innovation and interaction that kept the peers as well as the sessions lively throughout.

The last session on 10 June 2008 was observed as "FIFTH GRAPH THEORY DAY", with special activities such as expression of appreciation to the Invited Speakers and honoring Prof. E. Sampathkumar, the Founding President of the Academy of Discrete Mathematics (ADMA), India, on the occasion of his 72nd birth day. Also, it was decided and announced that a volume containing the best part of the technical proceedings of the ICDM-2008 would be brought out under the Ramanujan Mathematical Society's Lecture Notes Series in Mathematics (RMS-LNSM) with B.D. Acharya (SRC-IIIDMS, University of Mysore, Mysore, India), G.O.H. Katona (Hungarian Academy of Sciences, Budapest, Hungary) and J. Nešetřil (Charles University, Praha, Czech Republic) as Volume Editors.

Accordingly, today, we are happy to present this volume as a result of cooperation received from all the participants, Invited Speakers and, most of all, the patient and the perseverant referees (see the list appended to the volume) – we place on record our deep appreciation and thanks to each one of them.

Volume Editors May, 2008

Members of the Advisory Board

R. Balasubramanian (IMSc, Chennai, India) R. B. Bapat (ISI, Delhi, India) Manjul Bhargava (Princeton U, NJ, USA) J. H. Coates (Cambridge U, UK) W. Goldman (U of Maryland, Md, USA) G. Misra (IISc, Bangalore, India) V. Kumar Murty (U of Toronto, Canada) M. S. Narasimhan (IISc, Bangalore, India) Nitin Nitsure (TIFR, Mumbai, India) Gopal Prasad (U of Michigan, Michigan, USA) M. S. Raghunathan (TIFR, Mumbai, India) S. S. Sane (U of Mumbai, India) V. D. Sharma (IIT (Bombay), Mumbai, India) Alladi Sitaram (Formerly at ISI (Bangalore), India) V. Srinivas (TIFR, Mumbai, India) S. Thangavelu (IISc, Bangalore, India) V. S. Varadarajan (UCLA, California, USA) S. R. S. Varadhan (Courant Institute, New York, USA) S. T. Yau (Harvard U, Mass, USA)

Contents

Preface	iii	
Members of the Advisory Board	iv	
Domination in Hypergraphs II. New Directions B. D. Acharya		
Chain Decompositions of Normalized Matching Posets of Rank 2 Andrew Pearsall and Shahriar Shahriari	19–32	
On 1-Well-Covered Graphs Arthur S. Finbow and Bert L. Hartnell	33–44	
New Challenges in the Theory of Hypergraph Coloring Gábor Bacsó, Csilla Bujtás, Zsolt Tuza and Vitaly Voloshin		
A General Approach to Distance-Two Colouring of Graphs on Surfaces Jan van den Heuvel	59–67	
Graceful Labelings of Unicyclic Graphs Jay Bagga and Adrian Heinz	69–79	
The Spectra of Super Line Multigraphs Jay Bagga, Robert B. Ellis and Daniela Ferrero		
Out-Branchings with Extremal Number of Leaves Jørgen Bang-Jensen and Gregory Gutin		
Stability of Irregularity Strength on tK_4 and $K_1 \cup C_n$ K. M. Kathiresan and K. Muthugurupackiam		
Some Inequalities for Imbalances in Oriented Graphs Merajuddin and Madhukar Sharma		

vi Contents

A Note on Weak Chain-Co	mpleteness and Fixed	Point Property for	
Pseudo Ordered Sets	S. Parameshwara Bha	tta and Shiju George	119–123
Connectivity of Random Add Pau	lable Graphs I Balister, Béla Bollobá	s and Stefanie Gerke	125–132
Variations of Graph Coloring A Brief Survey	g, Domination, and Co <i>Renu Laskar, Jobby Ja</i>	mbinations of Both: cob and Jeremy Lyle	133–152
Directionally <i>n</i> -Signed Graph <i>E. Sampathkuma</i>	ns r, P. Siva Kota Reddy an	d M. S. Subramanya	153–160
3-Consecutive Vertex Colorir E. Sampathkun	ng of a Graph nar, M. S. Subramanya a	nd Charles Dominic	161–170
Recent Developments on the	Structure of Cartesian F	roducts of Graphs Sandi Klavžar	171–177
Not so Easy Problems for Tre	e Decomposable Graph	s Stefan Szeider	179–190
List Hereditary Colorings of	Graphs (Extended Absti	act) C. R. Subramanian	191–205
Matrices in the Theory of Sig	ned Simple Graphs	Thomas Zaslavsky	207–229
On Cordiality of One Point U of Graphs	nions and One Edge Uni Ujwala Deshmu	ions of Some Classes kh and N. B. Limaye	231–241
Some Cycle Related Cordial	Graphs in the Context o	f Vertex Switching	242 252

S. K. Vaidya, Sweta Srivastav, V. J. Kaneria and Kailas Kanani 243–252
