Preface

Nonconvex analysis is a rapidly developing, multi-disciplinary field of research, comprehending theoretical analysis in mathematical modelling of natural systems, bifurcation and chaos in dynamical systems, finite deformation theory, nonlinear partial differential equations, global optimization, calculus of variation, numerical methods, and scientific computations. The field of nonconvex analysis has undergone considerable development in a remarkably short time – with extensive applications to theoretical physics, material science, modern mechanics, complex systems, and scientific computations.

The present volume, *Handbook of Nonconvex Analysis and Applications*, was proposed by Shing-Tung Yau, a world-renowned mathematician at Harvard University, and we are honored to have been invited to edit it. The *Handbook* will serve as a much-needed reference work for the dynamic and ever-growing field of nonconvex analysis and its applications.

The *Handbook* consists of thirteen chapters written by notable experts in the field, addressing essential recent developments in nonconvex analysis and its applications, and keeping a balance between major areas of theory, methods, and applications. Each chapter provides an illuminating exposition of state-of-the-art approaches to a specific topic, with discussions of the central contributions, and pointers to some basic references. A variety of topics regarding nonconvex analysis and its applications are discussed: nonconvex variational principles; comparison principles; nonlinear eigenvalue problems; critical point theory; boundary value problems; topological methods, including Morse theory; nonlinear elliptic equations; evolution problems; difference equations; inequality problems; geometric properties of functions and spaces; and applications in mechanics.

We thank all the authors for their valuable work, and Mr. Brian J. Bianchini, production editor at International Press, for his efficient and generous support on behalf of the publisher.

Contents

<i>Preface</i>	<i>v</i>
Nonlinear difference equations through variational methods Gabriele Bonanno and Pasquale Candito	1
Sub-supersolution method for multi-valued elliptic and evolution problems Siegfried Carl and Dumitru Motreanu	45
Prox-regular sets and applications Giovanni Colombo and Lionel Thibault	99
Multiplicity of solutions for nonlinear elliptic equations with combined nonlinearities Leszek Gasiński and S. Papageorgiou	183
Study of some semilinear elliptic problems on \mathbb{R}^N via variational methods Alexandru Kristály and Nikolaos S. Papageorgiou	263
Equations and inequalities in Orlicz–Sobolev spaces: Selected topics Vy Khoi Le and Klaus Schmitt	295
Non-smooth critical point theory Roberto Livrea and Salvatore Angelo Marano	353
Evolution hemivariational inequalities with applications Stanisław Migórski	409
Morse theory and applications to variational problems Kanishka Perera	475
Quasiconvex optimization and its applications Enkhbat Rentsen	507
Nonlinear eigenvalue problems Biagio Ricceri	543
The method of Nehari manifold Andrzej Szulkin and Tobias Weth	597
Solutions for elliptic problems with precise sign information Zhitao Zhang	633
Index	679

Index

- Algorithms, Chapter 10
 Anti-maximum principle, Chapter 2
 Bifurcation, Chapter 13
 Clarke's subdifferential, Chapter 8
 Coercive function, Chapter 7
 Compactness conditions, Chapter 9
 Comparison principle, Chapter 2
 Concave term, Chapter 4
 Constant sign solutions, Chapter 4
 Critical groups, Chapter 9, Chapter 13
 Critical point, Chapter 1, Chapter 4,
 Chapter 5, Chapter 7, Chapter 11,
 Chapter 12, Chapter 13
 Critical set, Chapter 7
 Deformation result, Chapter 7, Chapter 9
 Descent flow, Chapter 13
 Directedness of solution set, Chapter 2
 Dirichlet problem, Chapter 2, Chapter 4,
 Chapter 5, Chapter 7, Chapter 11,
 Chapter 13
 Discrete nonlinear boundary value
 problems, Chapter 1
 Eigenvalue estimate, Chapter 11
 Ekeland's variational principle, Chapter 7
 Elliptic equation with discontinuous
 nonlinearity, Chapter 7
 Elliptic equation in bounded domain,
 Chapter 2, Chapter 4, Chapter 6,
 Chapter 9, Chapter 11, Chapter 12,
 Chapter 13
 Elliptic problems on \mathbb{R}^N , Chapter 5,
 Chapter 12
 Evolution hemivariational inequalities,
 Chapter 8
 Extremal solutions, Chapter 2, Chapter 4,
 Chapter 6
 Fucik spectrum, Chapter 9, Chapter 13
 General variational principle, Chapter 11
 Generalized Nehari manifold, Chapter 12
 Global optimization, Chapter 10
 Ground state, Chapter 12
 Handle body theorem, Chapter 9
 Hemivariational inequality, Chapter 2
 Homotopy-stable family, Chapter 7
 Hyperbolic hemivariational inequalities,
 Chapter 8
 Hypomonotonicity, Chapter 3
 Infinitely many solutions, Chapter 1
 Invariant set, Chapter 13
 Inverse problem, Chapter 8
 Jumping nonlinearities, Chapter 9,
 Chapter 13
 Krasnoselskii Genus, Chapter 12,
 Chapter 13
 Linking, Chapter 6, Chapter 9
 Local linking, Chapter 9
 Lotka-Volterra competing system,
 Chapter 13
 Lower solutions, Chapter 4
 Metric projection, Chapter 3
 Microeconomic analysis, Chapter 10
 Minimax principle, Chapter 6, Chapter 9
 Minimum time function, Chapter 3
 Morse inequalities, Chapter 9, Chapter 13
 Morse lemma, Chapter 9
 Morse theory, Chapter 4, Chapter 9
 Morse type numbers, Chapter 9
 Mountain Pass geometry, Chapter 5
 Mountain Pass theorem, Chapter 6,
 Chapter 7
 Multiple solutions, Chapter 1, Chapter 2,
 Chapter 4, Chapter 7, Chapter 12,
 Chapter 13
 Multi-valued periodic evolution problems,
 Chapter 2
 Nehari manifold, Chapter 12, Chapter 13
 Neumann problem, Chapter 11
 Nodal solutions, Chapter 4
 Nonlinear difference equations, Chapter 1
 Nonlinear eigenvalue problem, Chapter 11
 Nonlinear regularity, Chapter 4
 Nonlocal elliptic problems, Chapter 13
 Non-smooth function, Chapter 7
 Optimal control, Chapter 10
 Orlicz-Sobolev spaces, Chapter 6
 Oscillatory behaviour, Chapter 5
 (p-1)-linear function, Chapter 4
 (p-1)-superlinear function, Chapter 4
 p -Laplacian, Chapter 2, Chapter 4,
 Chapter 7, Chapter 9, Chapter 12,
 Chapter 13
 Palais-Smale condition, Chapter 1,
 Chapter 4, Chapter 7, Chapter 9,
 Chapter 11, Chapter 12, Chapter 13
 Palais-Smale sequence, Chapter 7,
 Chapter 12
 Parabolic hemivariational inequalities,
 Chapter 8
 Piezoelectricity, Chapter 8
 Potential operator, Chapter 11
 Principal eigenvalues, Chapter 6

- Principle of symmetric criticality, Chapter 5
Proximally smooth sets, Chapter 3
Proximate retracts, Chapter 3
Pseudomonotone operator, Chapter 2,
Chapter 8
Quasilinear elliptic equations, Chapter 6
Quasilinear elliptic inequalities, Chapter 6
Quasiconvex optimization, Chapter 10
Rapidly growing coefficients, Chapter 6
Saddle point, Chapter 7
Semipermeability relations, Chapter 8
Sensitivity analysis, Chapter 8
Sets with positive reach, Chapter 3
Shifting theorem, Chapter 9
Singularly perturbed problem, Chapter 12
Sign-changing solution, Chapter 4, Chapter
12, Chapter 13
Splitting, Chapter 7
Splitting lemma, Chapter 9
Sublinear growth at infinity, Chapter 5
Subsolution, Chapter 2, Chapter 6
Supersolution, Chapter 2, Chapter 6
Sweeping process, Chapter 3
Szulkin-type functionals, Chapter 5
Thermoviscoelasticity, Chapter 8
Three critical points theorems, Chapter 11
Truncations, Chapter 2, Chapter 4
Upper solutions, Chapter 4
Variational-hemivariational inequality,
Chapter 2, Chapter 6, Chapter 7
Variational inequality, Chapter 2,
Chapter 6
Variational methods, Chapter 1
Viscoelasticity, Chapter 8
Weakly convex sets, Chapter 3
Weak Palais-Smale condition, Chapter 7
Yang index, Chapter 13
