

CONTENTS

Preface to the Second Edition

Preface

Chapter I. Background and groundwork

§1. Linear wave equation: a review	1
§2. Energy inequality: a first version	12
§3. Existence and uniqueness for linear equations	18
§4. Local existence for quasilinear equations	25
§5. Local existence for semilinear equations in (1 + 3)-dimensions	32
Notes	38

Chapter II. Quasilinear equations with small data

§1. Klainerman-Sobolev inequalities	39
§2. Global existence in higher dimensions	50
§3. A weighted energy estimate	58
§4. Almost global existence for symmetric systems	62
§5. Null condition and global existence when $n = 3$	71
§6. The restriction theorem and local existence revisited	84
Notes	93

Chapter III. Semilinear equations with small data

§1. Strichartz's estimate for the wave equation	95
§2. John's existence theorem for \mathbb{R}^{1+3}	108
§3. Blow-up for small powers	114
Notes	120

Chapter IV. General Strichartz estimates

§1. The endpoint Strichartz estimates of Keel and Tao	121
§2. The Christ-Kiselev lemma and inhomogeneous estimates	136
§3. An application: Existence theorems for rough data	141
§4. Improved results under spherical symmetry	154
Notes	162

CONTENTS

Chapter V. Global existence for semilinear equations with large data	
§1. Main results	165
§2. Energy estimates and the subcritical case	171
§3. A decay lemma and the critical case	174
Notes	185
Appendix: Some tools from classical analysis	186
Bibliography	196
Index	204
Index of notation	204
