

Contents

<i>Preface</i>	<i>v</i>
Nonlinear difference equations through variational methods	1
Gabriele Bonanno and Pasquale Candito	
Sub-supersolution method for multi-valued elliptic and evolution problems	45
Siegfried Carl and Dumitru Motreanu	
Prox-regular sets and applications	99
Giovanni Colombo and Lionel Thibault	
Multiplicity of solutions for nonlinear elliptic equations with combined nonlinearities	183
Leszek Gasiński and S. Papageorgiou	
Study of some semilinear elliptic problems on \mathbb{R}^N via variational methods	263
Alexandru Kristály and Nikolaos S. Papageorgiou	
Equations and inequalities in Orlicz–Sobolev spaces: Selected topics	353
Vy Khoi Le and Klaus Schmitt	295
Non-smooth critical point theory	353
Roberto Livrea and Salvatore Angelo Marano	
Evolution hemivariational inequalities with applications	409
Stanisław Migórski	
Morse theory and applications to variational problems	475
Kanishka Perera	
Quasiconvex optimization and its applications	507
Enkhbat Rentsen	
Nonlinear eigenvalue problems	543
Biagio Ricceri	
The method of Nehari manifold	597
Andrzej Szulkin and Tobias Weth	
Solutions for elliptic problems with precise sign information	633
Zhitao Zhang	
Index	679
