Preface	ix
1 Introduction: Maxwell's Equations	1
1.1 Hodge Star	2
1.2 Maxwell's Equations	6
1.3 Conservation Law of Charge	7
1.4 Coulomb's Law	11
1.5 Ampère's Law	14
1.6 Biot-Savart Law	15
1.7 Gauss's Linking Formula	17
1.8 Faraday's Law	18
1.9 Ampère-Maxwell Law	19
1.10 Potential and Gauge	20
2 Static Electromagnetism	25
2.1 Electric Field and Scalar Potential	25
2.1.1 Poisson's and Laplace's Equation	25
2.1.2 Point Charge	26
2.1.3 Uniform Ball	27
2.1.4 Line Charges	29
2.2 Interface Condition	32
2.2.1 Infinite Plane Charge	32
2.2.2 Spherical Shell	36
2.2.3 Interface Condition	37
2.2.4 Electric Conductor	38
2.3 Boundary Value Problem	40
2.3.1 Uniqueness	40
2.3.2 Green's Function	41
2.3.3 Method of Image	44
2.4 Electric Dipole and Dielectric Polarisation	46
2.4.1 Electric Multipole Expansion	46
2.4.2 The Electric Dipole	49
2.4.3 Dielectric Matter	49

2.5	Magnetic Field and Vector Potential	52
2.5.1	Magnetic Field	53
2.5.2	Interface Condition	58
2.6	Magnetic Moment and Magnetic Dipole	59
2.6.1	Magnetic Moment	59
2.6.2	Magnetic Dipole Layers	63
2.7	Linking and Magnetic Helicity	65
2.8	Dirac Monopole	67
3	Electrodynamics	71
3.1	Force and Energy	71
3.1.1	Lorentz Force	71
3.1.2	Electromagnetic Energy	74
3.2	Electromagnetic Induction	77
3.2.1	Electromotive Force and Flux Rule	77
3.2.2	Mutual Inductance	80
3.2.3	Self Inductance	81
3.2.4	Magnetostatic Energy	82
3.3	Electromagnetic Wave	83
3.3.1	Wave Equation	83
3.3.2	Plane Waves	84
3.3.3	Polarization	86
3.3.4	Wave Packets	88
3.4	Green's Functions	90
3.4.1	Wave Equation with Source	90
3.4.2	Green's Function for the Wave Equation	91
3.4.3	Retarded and Advanced Solutions	93
3.5	Dipole Radiation	95
3.5.1	Spherical Wave	95
3.5.2	Electric Dipole Radiation	96
3.6	Moving Point Charge	100
3.7	Scattering	107
4	$U(1)$ Gauge Theory	109
4.1	Fiber Bundle	109
4.1.1	Fiber Bundle	109
4.1.2	Vector Bundle	115
4.1.3	Principal Bundle	119
4.2	$U(1)$ -connection and Parallel Transport	121
4.2.1	Vertical Vector Field	122
4.2.2	Connection 1-form	123
4.2.3	Horizontal Vector	125
4.2.4	Parallel Transport	126
4.3	Curvature and Chern Class	129
4.3.1	Curvature 2-form	129

4.3.2	Holonomy and Curvature	131
4.3.3	Chern Class	133
4.4	Local Gauge and Transition	134
4.4.1	Local Gauge 1-form via Trivialization	135
4.4.2	Connection via Transition Functions	138
4.5	Gauge Transformation	141
4.5.1	Gauge Transformation	141
4.5.2	Local vs. Global Gauge Transformations	144
4.6	Maxwell Theory as $U(1)$ -gauge Theory	146
4.6.1	Potential as Gauge 1-form	146
4.6.2	Electromagnetic Field as Curvature	146
4.6.3	Maxwell Action	147
4.6.4	Gauge Principle and Charge Conservation	148
4.6.5	Magnetic Monopole	148
4.7	Associated Bundle and Matter Field	150
4.7.1	Associated Vector Bundle	151
4.7.2	Hermitian Inner Product	152
4.7.3	Covariant Derivative	152
4.7.4	Matter Wave Function	154
5	Electromagnetism and Special Relativity	157
5.1	Lorentz Transformation	157
5.1.1	Lorentz Group	157
5.1.2	Transformation of Tensor Fields	159
5.1.3	Invariance of Inner Contraction	162
5.2	Lorentz Invariance of Maxwell's Equations	162
5.2.1	Transformation of Electromagnetic Fields	162
5.2.2	Transformation of Charge-Current Density	164
5.2.3	Transformation of Maxwell's Equations	164
5.3	Relativistic Lorentz Force Law	167
5.3.1	Non-relativistic Charged Particle	167
5.3.2	Relativistic Charged Particle	168
	Bibliography	171
